## CoreDX DDS Free University License Program

**The Twin Oaks Free University License Program provides CoreDX DDS™ licenses to qualified research organizations.**

The goal of the Free University License Program at Twin Oaks Computing is to help professors, instructors, and students successfully employ our CoreDX DDS™ middleware. CoreDX DDS™ is a small footprint implementation of the Data Distribution Standard (DDS) that is sponsored by the Object Management Group (OMG). DDS was designed specifically to meet the performance and quality of service requirements of real-time, embedded, time-critical, and mission-critical applications. Your research project will benefit from the opportunity to build upon a quality implementation of an important open standard middleware.

By participating in our Free University License Program, your research projects will gain access to our state of the art middleware technologies. These technologies can help rapidly advance research goals in several ways:

**CoreDX DDS™ is a High Performance Publish Subscribe Middleware Component**

- A stable and proven middleware technology like CoreDX DDS™ can accelerate system development by abstracting the complex details of network data communication.
- The unprecedented flexibility of the DDS Standard, with Dynamic Discovery and Type Safety, provide tools that are perfectly suited to system designs that evolve rapidly.
- Your ability to commercialize research projects is magnified by a strong infrastructure foundation.

Twin Oaks is committed to supporting the future generations of distributed systems that exploit the benefits of this world-class technology.

### Participant Requirements

Qualified university or research organizations are welcome to participate in our University License Program. Participating schools must agree to use the software for teaching and academic research purposes only. To be considered, an applicant to the program must be from accredited, degree-granting academic institutions.

### Ordering Instructions

Get started by visiting our website and downloading the 30-day Full Featured CoreDX DDS™ Evaluation software. During the registration process, simply indicate that you are interested in the University License Program. The duration of an University License Agreement is based on your particular project and can be extended as long as your work continues to meet the requirements of the Program.
